

1. Problem

In the semester of Matematicas, Maria obtained the following grades in 6 exams:

3.7, 3.7, 4.8, 3.5, 3.7, 3.2

What is the arithmetic mean of these grades?

- (a) 3.8
- (b) 3.7
- (c) 4.8
- (d) 4
- (e) 4.6

Solution

To calculate the arithmetic mean of Maria's grades, we must:

- (a) Add all the grades: $3.7 + 3.7 + 4.8 + 3.5 + 3.7 + 3.2 = 22.6$
- (b) Divide the sum by the number of grades: $22.6 / 6 = 3.8$

Therefore, the arithmetic mean is 3.8.

- (a) Correct
- (b) Incorrect
- (c) Incorrect
- (d) Incorrect
- (e) Incorrect
